About the journal

Aims and scope

An International Journal, A publication of the European Association for Signal Processing (EURASIP)

Signal Processing incorporates all aspects of the theory and practice of **signal processing**. It features original research work covering novel signal processing tools as well as tutorial and review articles with a focus on the signal processing issues. It is intended for a rapid dissemination of knowledge to engineers and scientists working in the research, development or practical application of signal processing.

Subject areas covered by the journal include:

- Statistical Signal Processing;
- Detection and Estimation;
- Spectral Analysis and Filtering;
- Machine Learning for Signal Processing;
- Optimization methods for Signal Processing;
- Multi-dimensional Signal Processing;
- Graph Signal Processing;
- Signal Processing over Networks;
- Signal Processing for Communications and networking;
- Biomedical Signal Processing;
- Image and Video Processing;
- Audio and Acoustic Signal Processing;
- Multimedia Signal Processing;
- Radar and Sonar Signal Processing;
- Remote Sensing;
- Data Science;
- Network Science;
- Software Developments and Open Source Initiatives;
- New Applications.

Type of Contributions:
The journal welcomes the following types of contributions.

Original research articles:
Research articles should not exceed 30 pages (single column, double spaced, including figures, tables and references) in length and must contain novel research within the scope of the journal.

Review articles:
Review articles are typically 30-60 pages (single column, double spaced, including figures tables and

references) in length, and provide a comprehensive review on a scientific topic. They may be relatively broad in scope, thereby serving a tutorial function, or be quite specialized, aimed at researchers in the chosen field.

Fast Communications:
A Fast Communication is a short, self-contained article highlighting ongoing research, or reporting interesting possibly tentative ideas, or comments on previously published research. Such articles should not exceed 10 pages (single column, double spaced, including figures, tables and references) in length. The objective is to provide detailed, constructive feedback on submitted papers and publish high quality papers within a very short period of time.

Article types

The journal welcomes the following types of contributions.

Original research articles
Research articles should not exceed 30 pages (single column, double spaced, including figures, tables and references) in length and must contain novel research within the scope of the journal.

Review articles
Review articles are typically 30-60 pages (single column, double spaced, including figures, tables and references) in length, and provide a comprehensive review on a scientific topic. They may be relatively broad in scope, thereby serving a tutorial function, or be quite specialized, aimed at researchers in the chosen field.

Short Communications
A Short Communication is a short, self-contained article highlighting ongoing research, or reporting interesting possibly tentative ideas, or comments on previously published research. Such articles should not exceed 10 pages (single column, double spaced) in length not including figures or tables which should accompany the submission as separate files. The editorial decision is typically binary to provide rapid dissemination of the results. The objective is to provide detailed, constructive feedback on submitted papers and publish high quality papers within a very short period of time. The target for a first reply is two months.

You may be requested by the Editor to submit a revision. Please assist us in achieving our ambitious goals for short publication times by submitting a revision at your earliest convenience. One set of page proofs in PDF format will be sent by e-mail to the corresponding author, to be checked for typesetting/editing. No changes in, or additions to, the accepted (and subsequently edited) manuscript will be allowed at this stage. Proofreading is solely your responsibility.

Peer review

This journal follows a single anonymized review process. Your submission will initially be assessed by our editors. If your submission is deemed suitable, it will typically be sent to be reviewed by a minimum of two reviewers for an independent expert assessment of the scientific quality. Our editors decide whether to accept or reject your article.

Read more about peer review.

Our editors are not involved in making decisions about papers that:

- they have written themselves.
- have been written by family members or colleagues.
- relate to products or services in which they have an interest.

Any such submissions will be subject to the journal's usual procedures. Peer review will be handled independently of the editor involved and their research group. Read more about editor duties.

Authors may formally appeal the editorial decision, provided the appeal meets all the requirements and follows the procedure in Elsevier's Appeal Policy. Only one appeal per submission will be considered and the decision will be final.

Special issues and article collections

Special issues and article collections follow the same peer review process as regular submissions, except that a guest editor may send the submissions out to the reviewers and may recommend a decision to the journal editor. The journal editor oversees the peer review process of all special issues and article collections to ensure the journal's standards of publishing ethics and responsiveness, and is responsible for the final decision on acceptance or rejection of articles.

Open access

See our open access information page to learn about open access options for this journal.

Ethics and policies

Publishing ethics

Authors must follow ethical guidelines stated in Elsevier's publishing ethics policies.

Submission declaration

When authors submit an article to an Elsevier journal it is implied that:

- The work described has not been published previously except in the form of a preprint, abstract, published lecture, academic thesis, or registered report. See our policy on multiple, redundant, or concurrent publication.
- The article is not under consideration for publication elsewhere.
- The article's publication is approved by all authors and tacitly or explicitly by the responsible authorities where the work was carried out.
- If accepted, the article will not be published elsewhere in the same form, in English or in any other language, including electronically, without the written consent of the copyright holder.

To verify compliance with our journal publishing policies, we may check your manuscript with our screening tools.

Authorship

All authors should have made substantial contributions to all of the following:

1. The conception and design of the study, or acquisition of data, or analysis and interpretation of data.
2. Drafting the article or revising it critically for important intellectual content.
3. Final approval of the version to be submitted.

All authors are accountable for all aspects of the work, to ensure that questions related to the accuracy or integrity of any part of the work are appropriately investigated and resolved.

Corresponding author

Authors must appoint a single corresponding author to communicate with the journal during the editorial process. This individual submits the manuscript and all required documentation to the journal, and serves as the primary contact between the journal and the co-authors. It is important that all contact details of the corresponding author are kept up to date throughout the submission and publication process.

Only the corresponding author's affiliation will be used to determine eligibility for a publishing agreement and possible discounts related to it. Affiliations of other co-authors are not relevant for eligibility.

Group authorship

Group authorship refers to the attribution of an article to a defined and named group of authors whose members have contributed to the work. Examples include research consortia, clinical trial groups, collaborative networks, task forces or working groups, expert panels or consensus groups, and participatory research groups.

- Group authorship must be declared on the title page *at submission*. When available, the submitting author should include the group under "Collaborative Author Groups" in the submission system.
- A corresponding author who agrees to coordinate all communications on behalf of the group must be designated.
- The group name will be included in the author list in the published article (e.g., "on behalf of the [Consortium Name]").
- All group members associated with the work should be listed in a dedicated section, preferably an appendix.
- All listed authors must follow the journal's authorship and authorship change policies.
- The group must maintain a transparent internal process for determining authorship and resolving disputes. All authorship disputes must be resolved within the group.

Changes to authorship

The editors of this journal generally will not consider changes to authorship once a manuscript has been submitted. It is important that authors carefully consider the authorship list and order of authors and provide a definitive author list at submission.

This journal's policy on authorship changes:

- All authors must be listed in the manuscript and their details entered into the submission system. Changes can only be made prior to acceptance, and only if approved by the journal editor. This includes addition, deletion, or rearrangement of author names.

- Requests to change authorship must be made by the corresponding author using the Authorship Change Request form. The corresponding author must provide the reason for the request to the journal editor with written confirmation from all authors, including any authors being added or removed, that they agree with the changes. Requests that do not comply with the instructions outlined in the form will not be considered.

- This journal does not allow authorship changes after acceptance. This includes addition, deletion, or rearrangement of author names, and changes to the corresponding author.

- The review process may be paused while an authorship change request is being considered.

- Change requests made by the authors without the Authorship Change Request form or editor approval may result in the rejection of the manuscript, or retraction if the article has already been published.

Declaration of competing interests

All authors must disclose any financial and personal relationships with other people or organizations that could inappropriately influence or bias their work. Examples of potential competing interests include:

- Employment

- Consultancies

- Stock ownership

- Honoraria

- Paid expert testimony

- Patent applications or registrations

- Grants or any other funding

- Affiliation with the journal as an editor or advisory board member

The declarations tool should always be completed.

Authors with a journal affiliation to declare should enter the following text under “Other Activities” within the declarations tool and should inform the journal and publisher prior to completing the submission process:

Given their role as [AUTHOR JOURNAL ROLE TITLE], [AUTHOR NAME] had no involvement in the peer review of this article and has no access to information regarding its peer review. Full responsibility for the editorial process for this article was delegated to another journal editor.

Editorial disclosure statements will be included as a footnote and/or in the declaration of competing interests section of the article.

Authors with no competing interests to declare should select the option "I have nothing to declare."

The resulting Word document containing your declaration should be uploaded at the "attach/upload files" step in the submission process. Save the document in .doc/.docx format. Author signatures are not required.

Funding sources

Authors must disclose any funding sources that provided financial support for the conduct of the research and/or preparation of the article. The role of sponsors, if any, should be declared in relation to the study design, collection, analysis, and interpretation of data, writing of the report, and decision to submit the article for publication. If funding sources had no such involvement, this should be stated in your submission.

List funding sources in this standard way to facilitate compliance with funder's requirements:

Funding: This work was supported by the National Institutes of Health [grant numbers xxxx, yyyy]; the Bill & Melinda Gates Foundation, Seattle, WA [grant number zzzz]; and the United States Institutes of Peace [grant number aaaa].

It is not necessary to include detailed descriptions of the program or type of grants, scholarships and awards. When funding is from a block grant or other resources available to a university, college, or other research institution, submit the name of the institute or organization that provided the funding.

If no funding has been provided for the research, please include the following sentence:

This research did not receive any specific grant from funding agencies in the public, commercial, or not-for-profit sectors.

Declaration of generative AI use

Authors must declare the use of generative AI tools in the manuscript preparation process upon submission of the paper.

Generative AI (GenAI) and AI-assisted technologies (AI tools) have been rapidly adopted in research and scholarly publishing, offering significant benefits while requiring clear standards for responsible and transparent use.

Authors preparing a manuscript for this journal may use AI tools to support them. However, these tools must never be used as a substitute for human critical thinking, expertise, and evaluation. AI tools may only be applied with human oversight and control.

Please read Elsevier's detailed author policy on the use of AI tools, as stated in Elsevier's GenAI policies for journals.

Ultimately, authors are responsible and accountable for the contents of their work. This includes accountability for:

- Carefully reviewing and verifying the accuracy, comprehensiveness, and impartiality of all AI generated output. This includes checking sources, as AI generated references can be incorrect or fabricated.
- Editing and adapting all material thoroughly to ensure the manuscript represents the author's authentic and original contribution and reflects their own analysis, interpretation, insights, and ideas.
- Ensuring accuracy and originality of any AI generated images and providing appropriate attribution where relevant.
- Ensuring the use of any tools or sources, AI based or otherwise, is made clear and transparent to readers. If AI tools have been used a disclosure statement is required upon submission, example below.
- Ensuring the manuscript is developed in a way that safeguards data privacy, intellectual property, and other rights, by checking the terms and conditions of any AI tool that is used.

Finally, authors must not list or cite AI tools as an author or co-author on the manuscript since authorship implies responsibilities and tasks that can only be attributed to, and performed by, humans.

The use of AI tools in the manuscript preparation process must be declared by adding a statement at the end of the manuscript when the paper is first submitted. The statement will appear in the published work and should be placed in a new section before the reference list. An example:

Title of new section: *Declaration of generative AI and AI-assisted technologies in the manuscript preparation process.*
Statement: *During the preparation of this work the author(s) used [NAME OF TOOL/SERVICE] to [REASON]. After using this tool/service, the author(s) reviewed and edited the content as needed and take(s) full responsibility for the content of the published article.*

The declaration does not apply to the use of basic tools, such as tools used to check grammar, spelling, and references. In addition, authors are not required to disclose the use of AI tools or features within specialist disability-related assistive technology, provided these are used solely for accessibility purposes.

If you have nothing to disclose, you do not need to add a statement.

Please note: to protect authors' rights and the confidentiality of their research, this journal does not currently allow academic editors and reviewers to upload an unpublished manuscript into a generative AI tool, as stated in Elsevier's GenAI policies for journals. However, AI tools may be used in a supportive

capacity by editors and reviewers to improve structure and language of the review report or editorial decision letter or to conduct a background literature search. Elsevier is actively evaluating compliant AI tools and may revise this policy in the future.

Preprints

Preprint sharing

Authors may share preprints in line with Elsevier's article sharing policy. Sharing preprints, such as on a preprint server, will not count as prior publication.

We advise you to read our policy on multiple, redundant, or concurrent publication.

In support of Open Science, this journal offers its authors a free preprint posting service on SSRN, Elsevier's preprint and early research repository.

During submission to this journal, you can choose to post your manuscript on SSRN, and it will be made publicly available as soon as it passes the journal's initial desk review.

As a preprint on SSRN, your manuscript will benefit from:

- Early registration with a preprint DOI (Digital Object Identifier)
- A link from the preprint to the version of record if published in this journal
- Preprint posting, sharing, and download availability that facilitates collaboration and early citations

Your decision to post or not post your preprint will have no effect on the editorial process or publication outcome with the journal. For additional information, please consult the SSRN Terms of Use and FAQs.

The corresponding author must seek approval from all co-authors before agreeing to post the manuscript publicly, prior to peer review, on SSRN.

Use of inclusive language

Inclusive language acknowledges diversity, conveys respect to all people, is sensitive to differences, and promotes equal opportunities. Authors should ensure their work uses inclusive language throughout and contains nothing that might imply one individual is superior to another on the grounds of:

- age
- gender
- race
- ethnicity
- culture

- sexual orientation
- disability or health condition

Avoid the use of descriptors about personal attributes unless they are relevant and valid. Write for gender neutrality with the use of plural nouns ("clinicians, patients/clients") as default. Wherever possible, avoid using "he, she," or "he/she."

Don't make assumptions about the beliefs of readers and keep writing free from bias, stereotypes, slang, reference to dominant culture, and cultural assumptions.

These guidelines are meant as a point of reference to help you identify appropriate language but are by no means exhaustive or definitive.

Reporting sex- and gender-based analyses

There is no single, universally agreed-upon set of guidelines for defining sex and gender. We offer the following guidance:

- Sex- and gender-based analyses (SGBA) should be integrated into research design when research involves or pertains to humans, animals, or eukaryotic cells. This should be done in accordance with any requirements set by funders or sponsors and best practices within a field.
- Sex and/or gender dimensions of the research should be addressed within the article or declared as a limitation to the generalizability of the research.
- Explicitly state applied definitions of sex and/or gender. This enhances precision, rigor, and reproducibility of the research, and avoids confusing terms and the constructs they refer to.

We advise you to read the Sex and Gender Equity in Research (SAGER) guidelines and the SAGER checklist (PDF) on the EASE website, which offer systematic approaches to the use of sex and gender information in study design, data analysis, outcome reporting, and research interpretation.

For further information we suggest reading the rationale behind and recommended use of the SAGER guidelines.

Definitions of sex and/or gender

We ask authors to define how sex and gender have been used in their research and publication. Some guidance:

- Sex generally refers to a set of biological attributes that are associated with physical and physiological features such as chromosomal genotype, hormonal levels, and internal and external anatomy. A binary sex categorization (male/female) is usually designated at birth ("sex assigned at birth") and is in most cases based solely on the visible external anatomy of a newborn. In reality, sex categorizations include people who are intersex/have differences of sex development (DSD).
- Gender generally refers to socially constructed roles, behaviors, and identities of women, men, and gender-diverse people that occur in a historical and cultural context and may vary across societies and

over time. Gender influences how people view themselves and each other, how they behave and interact, and how power is distributed in society.

Depending on the focus of a paper, sex and/or gender may or may not be relevant to the content of the paper. We recognize that beliefs, attitudes, and laws relating to sex and gender may vary. These articles do not attempt to dictate author beliefs but rather require that, where relevant to an author's research or paper, the author must provide clear explanations of how the paper and research define and use sex and gender.

Image manipulation

We accept that authors sometimes need to adjust images for clarity, but any manipulation of images for the purpose of deception or fraud will be seen as scientific ethical abuse and will be dealt with accordingly.

Authors must adhere to this journal's policy for graphical images:

- No specific feature within an image may be enhanced, obscured, moved, removed, or introduced.
- Adjustments of brightness, contrast, or color balance are acceptable as long as they do not obscure or eliminate any information present in the original image.
- Nonlinear adjustments such as changes to gamma settings must be disclosed in the figure legend.
- Use of AI tools to create or manipulate primary research images is not permitted. This includes images that represent experimental or observational data, such as western blots, microscopy images, histology images, or patient images. Please read our policy on the use of AI tools in figures, images, and artwork, which can be found in Elsevier's GenAI Policies for Journals.

To verify compliance with the above, this journal may send your images to a secure third-party tool to enable screening for image irregularities. Our editors make the final decision on whether images are acceptable, and they may ask you to provide original data or images if any questions arise as a result of the screening.

Authors are encouraged to carefully check all images before submission and to connect all the data in any figures to the original, unprocessed data.

Jurisdictional claims

Elsevier respects its authors' decisions on how they choose to designate territories and identify their affiliations in their published content. Elsevier's policy is to take a neutral position with respect to all territorial disputes or jurisdictional claims, including maps and institutional affiliations. For journals that Elsevier publishes on behalf of a third-party owner, the owner may set its own policy on these issues.

- Maps: Readers should be able to locate any study areas shown within maps using common mapping platforms. Maps should only show the area actually studied, and authors should not include a location map which displays a larger area than the bounding box of the study area. Authors should add a note clearly stating that "*map lines delineate study areas and do not necessarily depict accepted national*

boundaries." Editors may request authors to change maps during the review process if these guidelines are not followed.

- Institutional affiliations: Authors should use either the full, standard title of their institution or the standard abbreviation of the institutional name so that the institutional name can be independently verified for research integrity purposes.

Delayed publication

If you need to delay the publication of your article for any reason, please contact the editorial office of the journal or our Journal Article Publishing Support Center at the earliest possible opportunity. While we will try to ensure that your article is not published before a certain date if you make your request on a timely basis, we cannot guarantee this. Please also note that once the agreed period of delay has expired the article may be published at any time thereafter.

Withdrawal, correction, or retraction

For questions about article withdrawal, correction, or retraction, please consult Elsevier's Article Correction, Retraction and Removal Policy.

Writing and formatting

File format

Submit your manuscript and additional text-based files in an editable format:

- Submit files with .doc/.docx extensions for Word and .tex for LaTeX files. A PDF is not an acceptable source file.
- Format Word files in a single-column layout. Double-column formatting is only permitted for LaTeX submissions.
- Remove all strikethrough and underline formatting, unless it is scientifically relevant.

LaTeX

We encourage you use our LaTeX template when preparing a LaTeX submission. You will be asked to provide all relevant editable source files upon submission or revision.

Support for your LaTeX submission:

- LaTeX submission instructions and templates
- Journal Article Publishing Support Center LaTeX FAQs and support
- Researcher Academy's Beginners' guide to writing a manuscript in LaTeX

Title page

You are required to include the following details on the title page:

- Article title. Article titles should be concise and informative. Please avoid abbreviations and formulae, where possible, unless they are established and widely understood, e.g., DNA.

- Author names. Provide the given name(s) and family name(s) of each author. The order of authors should match the order in the submission system. Carefully check that all names are accurately spelled. You may add your name in parentheses in your own script after the English transliteration.

- Affiliations, referring to where the work was carried out, below the author names. Indicate affiliations using a lowercase superscript letter immediately after the author's name and in front of the corresponding address. Ensure that you provide the full name and postal address of each affiliation, including the country name.

- Corresponding author. Clearly indicate who will handle correspondence for your article: during the peer review and publication process, and also after publication. This responsibility includes answering any future queries about your results, data, or methodology. The email address of the corresponding author must be included on the title page and will be published in the article.

- Present/permanent address. If an author has changed affiliation since the work described in your article was carried out, or was visiting during that time, a "present address" (or "permanent address") can be indicated by a footnote to the author's name. The address where the author carried out the work must be retained as their main affiliation address. Use superscript Arabic numerals for such footnotes.

Abstract

You are required to provide a concise and factual abstract that does not exceed 250 words. The abstract should:

- State the purpose of your paper.

- Outline basic procedures followed.

- Include your main findings, their statistical significance, where applicable, and your principal conclusions.

- Emphasize new and important aspects of your study or observations.

Some guidelines:

- Abstracts must be able to stand alone, as abstracts are often presented separately from the article.

- Avoid references. If any are essential to include, ensure that you cite the author(s) and year(s).

- Avoid non-standard or uncommon abbreviations. If any are essential to include, ensure they are defined within your abstract at first mention.

Keywords

You are required to provide 1 to 7 keywords for indexing purposes. Keywords should be written in English. Try to avoid keywords consisting of multiple words (using "and" or "of").

Only use abbreviations in keywords if they are firmly established in the field.

Highlights

You are required to provide article highlights at submission.

Highlights are a short collection of bullet points that should capture the novel results of your research as well as any new methods used during your study. Highlights will help increase the discoverability of your article via search engines. Some guidelines:

- Submit highlights as a separate editable file in the online submission system with the word "highlights" included in the file name.
- Highlights should consist of 3 to 5 bullet points, each a maximum of 85 characters, including spaces.

We encourage you to view example article highlights and read about the benefits of their inclusion.

Graphical abstract

You are encouraged to provide a graphical abstract at submission.

The graphical abstract summarizes the contents of your article in a concise, pictorial, professional form, highlighting important aspects of the research. It is designed to appeal to an interdisciplinary audience and draw more attention to your online article. Some guidelines:

- Ensure you have obtained the necessary permission to include any third-party-owned material in a graphical abstract.
- Use of generative AI or AI-assisted tools in the production of graphical abstracts must align with Elsevier's GenAI Policies for Journals.
- Submit your graphical abstract as a separate file in the online submission system.
- Ensure the image is at least 1328 pixels wide, with the longest side horizontal, and is readable at a width of 13 cm.
- Preferred file types for graphical abstracts are TIFF, EPS, PDF, or MS Office files.

More information, examples, and a template can be found in the graphical abstract guidelines.

Units, classifications codes and nomenclature

Units

This journal requires you to use the International System of Units (SI) which follows internationally accepted rules and conventions. If other units are mentioned within your article, you should provide the equivalent unit in SI.

Math formulae

- Submit math equations as editable text, not as images.
- Present simple formulae in line with normal text, where possible.
- Use the solidus (/) instead of a horizontal line for small fractional terms such as X/Y.
- Present variables in italics.
- Denote powers of e by exp.
- Display equations separately from your text, numbering them consecutively in the order they are referred to within your text.

Tables

Tables must be submitted as editable text, not as images. Some guidelines:

- Place tables next to the relevant text or on separate page(s) at the end of your article.
- Cite all tables in the manuscript text.
- Number tables consecutively according to their appearance in the text.
- Please provide captions along with the tables.
- Place any table notes below the table body.
- Avoid vertical rules and shading within table cells.

Use tables sparingly, ensuring that any data presented in tables is not duplicating results described elsewhere in the article.

Figures, images, and other artwork

Figures, images, diagrams, and other graphical media (artwork) must be supplied as separate files along with the manuscript, in line with these artwork and media instructions. Some excerpts:

When submitting artwork:

- Cite all images in the manuscript text.
- Number images according to the order they appear within your article.
- Submit each image as a separate file using a logical naming convention for your files (for example, Figure_1, Figure_2 etc.).

- Text graphics may be embedded in the text at the appropriate position. If you are working with LaTeX, text graphics may also be embedded in the file.

Captions

All artwork must have a caption. A caption should consist of a brief title (not displayed on the figure itself) and a description of the image. Keep the amount of text to a minimum, though any symbol or abbreviation should be explained.

More information about adding captions to your submission..

Formats

Submit your artwork in the formats listed below, following the given requirements:

Image type	Recommended file type	Requirements
Vector drawings	EPS, PDF	Embed the font or save text as graphics
Photographs (color or grayscale)	TIFF, JPG, PNG	Minimum resolution 300 dpi (min. width: single column: 1063 pixels; full page: 2244 pixels)
Bitmapped line drawings	TIFF, JPG, PNG	Minimum resolution 1000 dpi (min. width: single column: 3543 pixels; full page: 7480 pixels)
Charts and large or shaded tables	XLS, XLSX	Supply in a clearly readable format
Annotated images	PPT, PPTX	Annotations and text must be legible; Minimum resolution of embedded images 300 dpi

Do not submit:

- Files that are too low in resolution.
- Artwork where text is disproportionately small compared to the image size, as text may become unreadable.

- Multiple images or graphs combined into one file, as this affects legibility and accessibility. An exception may be made for images that are intended to be compared to each other, such as before, during, and after photographs.

Color artwork

If you submit usable color figures with your accepted article, we will ensure that they appear in color online. Please ensure that color images are accessible to all, including those with impaired color vision. Learn more about color and web accessibility.

Generative AI and figures, images and other artwork

Please read our policy on the use of generative AI and AI-assisted tools in figures, images, and artwork, which can be found in Elsevier's GenAI Policies for Journals. This policy states:

- AI tools may be used to support the creation of explanatory images (such as flow charts, conceptual diagrams, or schematic illustrations).

- AI tools may be used to create data visualizations (such as plots, charts, graphs, or heatmaps) when the output is directly derived from underlying data using reproducible analytical, computational, or statistical methods.

- AI tools must not be used to create or alter images that represent primary observed or experimental data (such as western blots, microscopy images, histology images, or patient images) that were not directly obtained in the research. This includes adjustments to brightness, contrast, or color balance, which should only be done using established image processing software.

- This policy does not prevent the use of AI tools in formal research design or research methods (such as in AI-assisted imaging approaches used for collection and/or interpretation of the underlying research data or predictive modeling of clinical outcomes based on patient data).

Authors are responsible for ensuring the accuracy and originality of all images submitted for publication. If you used generative AI tools to create images in your manuscript, disclose this in each image caption as well as in the general generative AI disclosure statement.

Supplementary material

We encourage the use of supplementary materials such as applications, images, and sound clips to enhance research. Some guidelines:

- Supplementary material should be accurate and relevant to the research.

- Cite all supplementary files in the manuscript text.

- Submit all supplementary material at the same time as your manuscript.

- Include a concise caption for each supplementary file, describing its content.

- After submission, supplementary files can only be added or replaced in the revision stage of the editorial process.

- Be aware that all supplementary material provided will appear online exactly as received. These files will not be checked, formatted, or typeset by the production team. Make sure to remove any unwanted formatting.

Video

This journal accepts video material and animation sequences to support and enhance your scientific research. We encourage you to include links to video or animation files within articles. Some guidelines:

- When including video or animation file links within your article, refer to the video or animation content by adding a note in your text where the file should be placed.

- Give each file a clear name, directly related to its content.

- Provide files in one of our recommended file formats. Files should be within our preferred maximum file size of 150 MB per file, 1 GB in total.

- Provide "stills" for each of your files. These will be used as standard icons to personalize the link to your video data. You can choose any frame from your video or animation or make a separate image.

- Provide descriptive text in your manuscript to refer to the video content. This text helps ensure accessibility for visually impaired readers, and is essential for journals publishing in print.

We publish all video and animation files supplied in the electronic version of your article.

For more detailed instructions, we recommend that you read our guidelines on submitting video content to be included in the body of an article.

Research data

Research data

We are committed to supporting the storage of, access to and discovery of research data, and our research data policy sets out the principles guiding how we work with the research community to support a more efficient and transparent research process.

Research data refers to the results of observations or experimentation that validate research findings, which may also include software, code, models, algorithms, protocols, methods and other useful materials related to the project.

Please read our guidelines on sharing research data for more information on depositing, sharing and using research data and other relevant research materials.

Research data deposit, citation and linking

For this journal, **Option C** instructions from our research data guidelines apply. This means that you are **required** to:

- Deposit your research data in a relevant data repository.
- Cite and link to this dataset in your article.
- If this is not possible, make a statement explaining why research data cannot be shared.

Data statement

To foster transparency, you are required to state the availability of any data at submission.

Ensuring data is available may be a requirement of your funding body or institution. If your data is unavailable to access or unsuitable to post, you can state the reason why (e.g., your research data includes sensitive or confidential information such as patient data) during the submission process. This statement will appear with your published article on ScienceDirect.

Read more about the importance and benefits of providing a data statement.

Data linking

Linking to the data underlying your work increases your exposure and may lead to new collaborations. It also provides readers with a better understanding of the described research.

If your research data has been made available in a data repository there are a number of ways your article can be linked directly to the dataset:

- Provide a link to your dataset when prompted during the online submission process.
- For some data repositories, a repository banner will automatically appear next to your published article on ScienceDirect.
- You can also link relevant data or entities within the text of your article through the use of identifiers. Use the following format: Database: 12345 (e.g. TAIR: AT1G01020; CCDC: 734053; PDB: 1XFN).

Learn more about linking research data and research articles in ScienceDirect.

Co-submission of related data, methods or protocols

You are encouraged to publish a description of your research data, methods, or protocols related to your regular article as a co-submission article in Data in Brief or MethodsX.

This co-submission can be submitted at the same time as your regular manuscript submission to this journal. If both your regular and co-submitted manuscripts are accepted for publication, they will be linked together on ScienceDirect, thereby promoting research reproducibility, interoperability, and open science.

- Prepare a separate manuscript describing your research data, methods, or protocols using the mandatory templates from Data in Brief or MethodsX.
- Submit this co-submission alongside your regular manuscript as a separate submission item, after which it will be automatically forwarded to *Data in Brief* or *MethodsX* and assigned an editor.

- For associated Article Publishing Charge (APC) details, please visit:
    - MethodsX
    - Data in Brief

Note that due to the automated process of submitting to *Data in Brief* or *MethodsX*, you will only be presented with an APC after acceptance. This will be a personalized charge based on your individual context (e.g., your country, institutional affiliation, and society membership for example).

Please visit the co-submission Researcher Support page for more information on how to submit a co-submission.

Article structure

Article sections

- Divide your manuscript into clearly defined and numbered sections. Number subsections 1.1 (then 1.1.1, 1.1.2, ...), then 1.2, etc.
- Use the numbering format when cross-referencing within your article. Do not just refer to "the text."
- You may give subsections a brief heading. Headings should appear on a separate line.
- Do not include the article abstract within section numbering.

Theory and calculation

The theory section should lay the foundation for further work by extending the background you provided in the introduction to your article. The calculation section should represent a practical development from a theoretical basis.

Acknowledgements

Include any individuals who provided you with help during your research, such as help with language, writing, or proofreading, in the acknowledgments section.

Acknowledgments should be placed in a separate section that appears directly before the reference list. Do not include acknowledgments on your title page, as a footnote to your title, or anywhere else in your article other than in the separate acknowledgments section.

Author contributions: CRediT

Corresponding authors are required to acknowledge co-author contributions using CRediT (Contributor Roles Taxonomy) roles:

- Conceptualization
- Data curation
- Formal analysis

- Funding acquisition
- Investigation
- Methodology
- Project administration
- Resources
- Software
- Supervision
- Validation
- Visualization
- Writing – original draft
- Writing – review and editing

Not all CRediT roles will apply to every manuscript, and some authors may contribute through multiple roles.

We advise you to read more about CRediT and view an example of a CRediT author statement.

Appendices
We ask you to use the following format for appendices:

- Identify individual appendices within your article using the format: A, B, etc.
- Give separate numbering to formulae and equations within appendices using formats such as Eq. (A.1), Eq. (A.2), etc. and in subsequent appendices, Eq. (B.1), Eq. (B.2) etc. In a similar way, give separate numbering to tables and figures using formats such as Table A.1; Fig. A.1, etc.

References

References within text
Any references cited in your article should also be present in your reference list and vice versa. Some guidelines:

- References cited in your abstract must be given in full.
- Make sure all data provided in your reference list are correct and complete.
- Every reference included must correspond to a real, existing source.

- Where available include Digital Object Identifiers (DOIs), as they provide a permanent link to the electronic article referenced and improve the discoverability of your research.

- We recommend not including unpublished results or personal communications in your reference list, though you may mention them in the text of your article. If included, they must follow the standard reference style of the journal, substituting publication date with “unpublished results” or “personal communication”.

- References cited as “in press” imply that the item has been accepted for publication.

Reference format
This journal does not set strict requirements on reference formatting at submission. Some guidelines:

- References can be in any style or format as long as the style is consistent.

- Author names, journal or book titles, chapter or article titles, year of publication, volume numbers, article numbers, and pagination must be included, where applicable.

Our journal reference style will be applied to your article after acceptance, at proof stage. If required, at this stage we will ask you to correct or supply any missing reference data.

Reference style
Indicate references by adding a number within square brackets in the text. You can refer to author names within your text, but you must always give the reference number, e.g., "as demonstrated [3,6]. Barnaby and Jones [8] obtained a different result ....".

Number references in the order they appear in your article.

Abbreviate journal names according to the List of Title Word Abbreviations (LTWA).

Examples:

Reference to a journal publication:
[1] J. van der Geer, T. Handgraaf, R.A. Lupton, The art of writing a scientific article, J. Sci. Commun. 163 (2020) 51 – 59. https://doi.org/10.1016/j.sc.2020.00372.

Reference to a journal publication with an article number:
[2] J. van der Geer, T. Handgraaf, R.A. Lupton, 2022. The art of writing a scientific article. Heliyon. 19, e00205. https://doi.org/10.1016/j.heliyon.2022.e00205.

Reference to a book:
[3] W. Strunk Jr., E.B. White, The Elements of Style, fourth ed., Longman, New York, 2000.

Reference to a chapter in a book:
[4] G.R. Mettam, L.B. Adams, How to prepare an electronic version of your article, in: B.S. Jones, R.Z. Smith (Eds.), Introduction to the Electronic Age, E-Publishing Inc., New York, 2020, pp. 281 - 304.

Reference to a website:
[5] Cancer Research UK, Cancer statistics reports for the UK. http://www.cancerresearchuk.org/aboutcancer/statistics/cancerstatsreport/, 2023 (accessed 13 March 2023).

Reference to a dataset:
[6] M. Oguro, S. Imahiro, S. Saito, T. Nakashizuka, Mortality data for Japanese oak wilt disease and surrounding forest compositions [dataset], Mendeley Data, v1, 2015. https://doi.org/10.1234/abc12nb39r.1.

Reference to software:
[7] E. Coon, M. Berndt, A. Jan, D. Svyatsky, A. Atchley, E. Kikinzon, D. Harp, G. Manzini, E. Shelef, K. Lipnikov, R. Garimella, C. Xu, D. Moulton, S. Karra, S. Painter, E. Jafarov, S. Molins, Advanced Terrestrial Simulator (ATS) v0.88 [software], Zenodo, March 25, 2020. https://doi.org/10.1234/zenodo.3727209.

Web references
When listing web references, as a minimum you should provide the full URL and the date when the reference was last accessed. Additional information (e.g., DOI, author names, dates, or reference to a source publication) should be provided if known.

You can list web references separately under a new heading directly after your reference list or include them in your reference list.

Data references
We encourage you to cite underlying or relevant datasets within article text and to list data references in the reference list.

When citing data references, you should include:

- author name(s)
- dataset title
- data repository
- version (where available)
- year
- global persistent identifier

Add [dataset] immediately before your reference. This will help us to properly identify the dataset. The [dataset] identifier will not appear in your published article.

Software references
Cite software (including computational code, scripts, models, notebooks, and libraries) in the same way as other sources. This supports proper attribution and credit, reproducibility, collaboration, and reuse, and encourages building on the work of others to further research. Useful information is provided in this article on the essentials of software citation.

A reference to software should include the following elements:

- *Creator(s):* the authors or project that developed the software.
- *Title:* the name of the software.
- *Publication venue:* the publication venue of the software, preferably an archive or repository that provides permanent identifiers.
- *Date:* the date the software was published. This is the date associated with a release or version of the software, or “n.d.” if the date is unknown.
- *Identifier:* a resolvable pointer to the software, preferably a PID that resolves to a landing page containing descriptive metadata about the software, similar to a DOI for a paper. DOIs are preferred. Other accepted PIDs include Handles, RRIDs, ASCL IDs, swMath IDs, Software Heritage IDs, and ARK Alliance. If there is no PID for the software, a URL to the software is the best identifier available.
- *Version:* the identifier for the version of the software being referenced. If the version is unidentified or unknown, the date of access should be used.
- *Type:* some reference styles (e.g., APA) require a bracketed description of the citation (e.g., [Computer software]) to be included.

If an article exists that describes the software, it should be cited as an additional reference long with the software itself. Do not cite the article instead of the software.

Preprint references

You may reference preprints that are central to your work or that cover crucial developments in the topic, but are not yet formally published.

Mark preprints clearly. Include the word "preprint" or the name of the preprint server as part of your reference, and provide the preprint DOI.

Where a preprint has subsequently become available as a peer-reviewed publication, use the formal publication as your reference.

Reference management software

Most journals have their reference template available in popular reference management software products. These include products that support Citation Style Language (CSL), such as Mendeley Reference Manager.

If you use a citation plug-in from these products, select the relevant journal template, and all your citations and bibliographies will automatically be formatted in the journal style. We advise you to remove all field codes before submitting your manuscript to any reference management software product.

If a template is not available for this journal, follow the format given in examples in the reference style section of this guide for authors.

Submitting your manuscript

Submission checklist

Before completing the submission of your manuscript, we advise you to read our submission checklist:

- One author has been designated as the corresponding author, and their full contact details have been provided. These must be kept up to date during the submission and publication process. Eligibility for a publishing agreement will be based on the corresponding author's affiliation.
- All files have been uploaded, including artwork, videos, and supplementary materials. Don't forget to include tables and footnotes in the files, and to submit captions.
- Spelling and grammar checks have been carried out.
- All references in the article text are cited in the reference list, and vice versa.
- Permission has been obtained for the use of any copyrighted material from other sources, including the Web.
- For open access articles, all authors understand that they are responsible for payment of the Article Publishing Charge (APC) if the manuscript is accepted. Payment of the APC may be covered by the corresponding author's institution or the research funder.

Submit online

Our online submission system guides you through the process of entering your manuscript details and uploading your files.

Follow this link to submit your paper.

All correspondence, including notification of the editor's decision and requests for revision, is sent by email.

After receiving a final decision

Article Transfer Service

If your manuscript is more suitable for an alternative journal published by Elsevier, you may receive an email asking you to consider transferring your manuscript via Elsevier's Article Transfer Service.

The recommendation could come from the journal editor, a dedicated in-house scientific managing editor, a tool-assisted recommendation, or a combination.

If you agree with the recommendation, your manuscript will be transferred and independently reviewed by the editors of the new journal. You will have the opportunity to make revisions, if necessary, before the submission is complete at the destination journal.

Publishing agreement

Authors are asked to complete a publishing agreement after acceptance. The corresponding author receives a link to the online agreement by email.

Elsevier's policies related to copyright explain more about our copyright policies, and additional rights for subscription and open access articles for your and your employer/institution.

License options

Authors will be offered open access user license options that determine how you, and third parties, can reuse your open access article. We advise that you review these options and any funding body license requirements before selecting a license option.

Open access

See our open access information page to learn about open access options for this journal.

Permission for copyrighted works

If excerpts from other copyrighted works are included in your article, you must obtain written permission from the copyright owners and credit the source(s) within your article using Elsevier's permission request and license form.

Proof correction

To ensure a fast publication process, we ask you to provide proof corrections within two days.

Corresponding authors will receive an email with a link to our online proofing system. There you can edit text, comment on figures and tables, and answer questions raised by our copy editor. This email will include instructions and available alternative proofing methods.

Alt text for images and captions or audio descriptions for videos may have been added to improve accessibility. These have been independently generated with the aid of AI. Please check them in your proofs. You can find more information in this alt text guide and Elsevier's page about improving accessibility.

The purpose of the proof is to check the typesetting, editing, completeness, and correctness of your article text, tables, and figures. Significant changes to your article at the proofing stage will only be considered with approval of the journal editor.

Sharing your published article

To share your article on social media or by email, we send the corresponding author the Digital Object Identifier (DOI) link. For subscription articles we also send a customized Share Link offering 50 days of free access.

Responsible sharing

We encourage you to share and promote your article to give additional visibility to your work, enabling your paper to contribute to scientific progress and foster the exchange of scientific developments within your field. Read more about how to responsibly share and promote your article.

Resources for authors

Elsevier Researcher Academy

If you would like help to improve your submission or navigate the publication process, support is available via Elsevier Researcher Academy.

Elsevier Researcher Academy offers free e-learning modules, webinars, downloadable guides, and research writing and peer review process resources.

Language and editing services

We recommend that you write in American or British English but not a combination of both.

If you feel your manuscript requires editing to eliminate possible grammar or spelling errors, and conform to correct scientific English, you can use the English Language Editing service provided by Elsevier's Author Services.

Getting help and support

Author support

We recommend that you visit our Journal Article Publishing Support Center if you have questions about the editorial process or require technical support for your submission. Some useful links:

- Step-by-step guide to publishing
- Five pre-submission tips
- How can I track the status of my submitted article?
- When will my article be published?
